DETAILED ACTION

Election/Restrictions

1. Newly submitted claims 21-24 directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: having the fuel cell system being powered in part by a combination of air and pressurized gas fuel, lowering the pressure of the pressurized gas fuel in order to operate the fuel cell system and recover the amount of potential energy from the pressurized gas fuel in the form of mechanical force and applying a portion of the driving force directly to an electric machine and using a portion of the electrical power to raise the pressure of the air and using a portion of the electrical power to power one or more loads

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 21-24 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Carlos Hanze on June 3, 2003.

Also, the applicant requested to cancel without prejudice claims 21-24 at this point and elected to be prosecuted claims 1-20.

The application has been amended as follows:

A) Cancel claims 21-24.

3. The following is an examiner's statement of reasons for allowance: The prior art discloses a system for recovering potential energy having a fuel cell, pressurized fuel gas, a fuel tank, an electric machine and a first and second conduit system. However, the prior art fails to show, in combination with the invention, a first conduit system for coupling a fuel tank to the fuel cell and for allowing the pressurized gas fuel to be selectively communicated to the fuel cell, an expander disposed within the first conduit for generating torque and lowering the pressure of

the pressurized gas fuel which is communicated to the fuel cell, a second conduit for coupling the fuel cell to a source or air and for allowing air to be selectively communicated to the fuel cell, a compressor disposed within the second conduit system coupled to the expander and an electric machine coupled to the expander and to the compressor, a motor/generator for converting torque into electrical power and a compressor coupled to the motor/generator and using a clutch for selectively connecting and disconnecting the expander and the compressor.

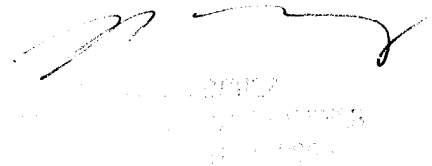

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
